

Pocket-sized fleet management

TomTom WEBFLEET® Mobile

Manage on the move

With TomTom WEBFLEET® Mobile you can keep your business on the move while you're out on the road. It enables you to view, control and manage your dispersed workforce at anytime, and from anywhere. So you can stay on top of the business you already have while you're out getting more.

Offer better service

If a customer rings with a query, you can summon up the relevant information in seconds. Thanks to WEBFLEET® Mobile, everything you need to provide an excellent service is there on your phone or tablet when you're not at your desk.

Stay in control

If you want to stay in control of your business, you'll need to stay in touch with events. With WEBFLEET® Mobile you can receive an automatic notification of status updates as they happen, across the fleet.

Increase efficiency

WEBFLEET® Mobile shows you at a glance where your vehicles are and which ones are available, so you can always send the best placed person for a new job, taking the current traffic situation into account.

Impress customers

WEBFLEET® Mobile gives you instant access to data from the field, so you can always give your customers accurate information on the status of current jobs. For example, you can tell them where your drivers are now, where they're headed, and the ETA for reaching their destination. You'll know the moment an order is overdue, so you can do something about it before the phone rings. And when a customer calls with a last minute request you can handle it from the road just as well as you could from the office.

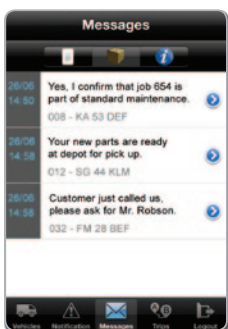

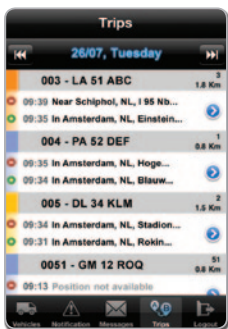

Easy to use

It's really easy to use, too. Most of the information is available in one touch, and commands are carried out using the same tap or swipe action you use for other Smartphone and tablet apps.
