IROAD FX2 PRO - Initial Setup

1. Switch on the vehicle's ignition to power up the camera.
2. Download the IROAD DASH CAM app from the Apple App Store or Google Play Store
3. Select United Kingdom for the Speed Camera settings
4. Swipe from the top of the screen to confirm Wi-Fi and Location are turned on
5. Press the Wi-Fi registration button on the side of the camera. Wait until the camera announces: "Standby mode for registration."
6. Open the Wi-Fi settings on your phone. Look for the camera's Wi-Fi network (the name will look like - IROAD_*model name*_xxxxxx)
7. **Wi-Fi password: qwertyuiop**
8. Your phone may warn you that the network has no internet connection. This is normal because the phone is connecting directly to the camera. Choose the option to remain connected.
9. Return to the app, you should hear "Registration Complete"
10. The FX2 Pro should then appear on the app's main screen.
11. Select 'Live View' to confirm the camera is connected. You can then view previous recordings and saved footage.

If the camera does not connect

1. Check that the vehicle ignition and camera are still switched on.
2. Make sure your phone remains connected to the IROAD Wi-Fi network.
3. If the phone automatically switches back to mobile data or another Wi-Fi network, temporarily disable mobile data or automatic Wi-Fi switching.
4. Press the camera's Wi-Fi registration button again and wait for the registration announcement.
5. Close and reopen the IROAD app after connecting through the phone's Wi-Fi settings.
