Webfleet LINK 350 Activation

Before you begin, you will need access to the Webfleet Installer app. If you don't, please request this from G-Force/Webfleet.

SCALAR Installation Wizard

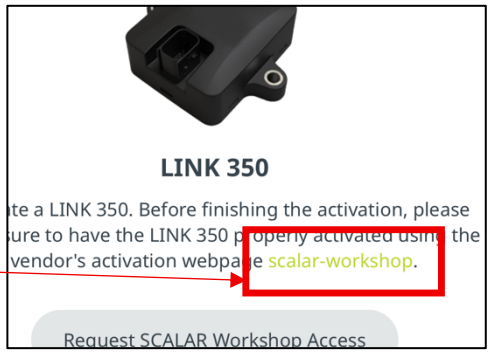
<u>The trailer must be receiving power for this next part</u>



1. Open Webfleet Installer App
2. Select Serial Number
3. Select Link 350 activation
4. If you don't have a SCALAR Workshop account, press 'Request SCALAR access'
5. Complete form and tick checkbox
6. Back on the installer app, press the link to the SCALAR workshop
7. Sign in
8. Select 'Unit inspection and more'
9. Scan the code if you have it, if not, press enter serial number manually
10. Under Health Status, wait for all the checks to go green (Battery, Positioning & TBS)
11. Select 'Inspect unit installation'
12. Complete these details with details provided (this isn't mandatory but will help the customer)
13. TPMS is likely going to say not detected
14. Send installation report – add your email so you get the report

Activating via Webfleet Installer App

1. Go back to the Webfleet Installer app
2. Press next on the Link 350 page
3. Enter Customer activation key
4. Select the contract you would like to use, press next
5. Enter the IMEI number
6. Enter number plate
7. Press activate
8. If powered, the activation will go through successfully

Webfleet Portal Changes

1. Log in to the customers Webfleet account
2. Go to the Assets tab, search for the IMEI number
3. Click the asset, press details in the bottom right
4. Press edit
5. Change name to the Trailer Number plate
6. You should be able to see the device battery level
